

TORCA DURASEAL™ BAND CLAMP

TORC 0715

Look **NO** Further for a Severe Service Exhaust band clamp! The DuraSeal™ is a serious heavy-duty band clamp made for LAP-JOINT exhaust connections (pipe-into-pipe or pipe-into-muffler.), & is widely used on OEM exhaust applications - for a reason. When you are looking for a band clamp a notch up from the AccuSeal™, this is the clamp. Be careful when tightening - a DuraSeal™ can crush pipes! Following are some key bullet points of the DuraSeal™:

Made of beefy 3/32" thick 409 Non-Bright Stainless Steel. This clamp is all function. 1-1/4" wide band.

Hardened Grade-8 clear zinc-plated hardware included - clamps are fully assembled as shown. Will not distort or "crimp" exhaust connections like U-Clamps when installed properly. Easy disassembly of exhaust pipes later-on.

Approx. 40% stronger rotation resistance than AccuSeal™ Clamps when properly installed.

Approx. 55% stronger separation resistance than AccuSeal™ Clamps when properly installed.

Available in 4" & 5" sizes for aftermarket only through Grand Rock Exhaust at this time.

PART #:	SIZE:
DS-4SS	4"
DS-5SS	5"
